

## What are the benefits to Site Access?

The new functionality allows data to be captured in near real time and electronically and so replaces the need to sign paperwork.

- Swipe out and start the 12 hour rest rule to deter double shifting
- Records Risk Assessments
- Records basic fatigue data including travel to and from work

These amendments have been made through the standards variation process and mean that an electronic signature can be used rather than a wet signature.

Prevents & deters double shifting	Ensures that a risk assessment is recorded when insufficient rest has been identified	Identifies excessive hours worked, including travel time (to and from work)
Allows for use of competences to be recorded; cuts out the requirement of the competency log book	Replaces wet signatures	

We would love to hear from you if you are recording Safety Briefings or competences via the app so please [share your experiences with us](#).
