Sentinel

Even Safer, Smarter and Simpler

Sentinel has had a digital makeover!

This includes a brand-new look, featuring upgraded admin dashboards, enhanced with data insights and the introduction of virtual Sentinel cards for individuals.

These new enhancements will help us all to work in a way that is even safer, smarter and simpler.

Here's what you need to know about what's coming.

A modernised and attractive interface

Sentinel's digital makeover includes a complete refresh of the admin dashboards and mySentinel.
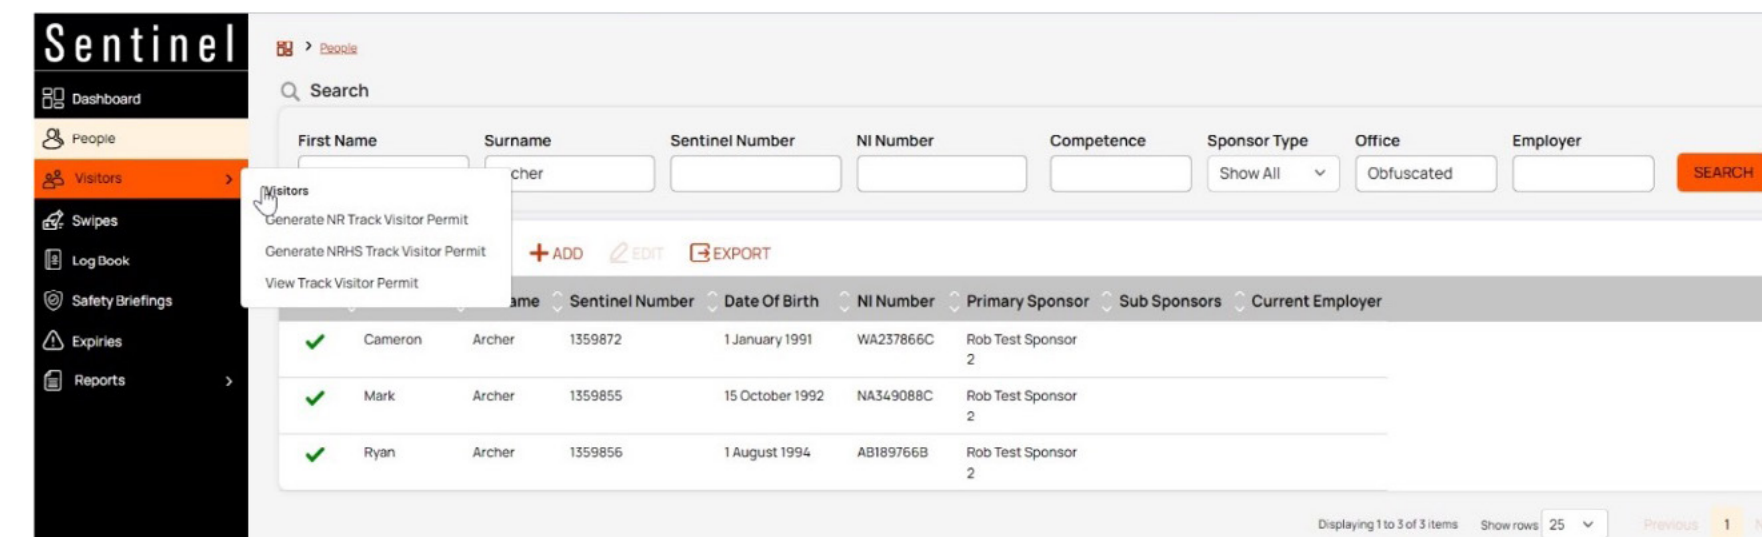

The interface that Admins see when they use Sentinel has had a revamp, making it intuitive and easier to use with a range of new graphics and data. All presented in a modern new look.
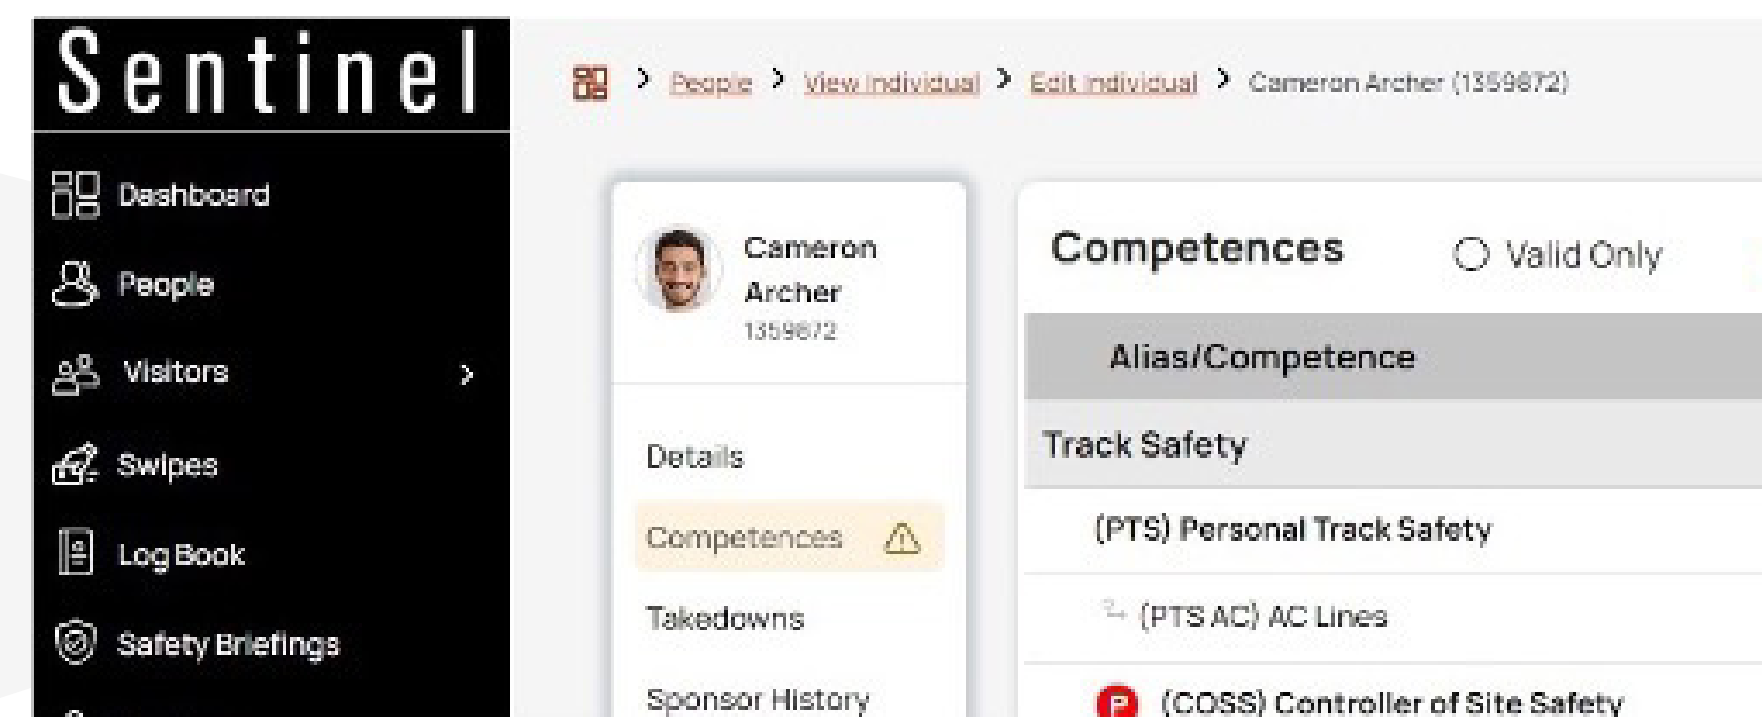

Sentinel

Administrator views

Although the appearance is new, all the same features you're used to are still there and just as easy to find. Here are some quick tips on using Sentinel with the new look.

General layout

The former horizontal menu at the top of the screen is now a vertical one on the left-hand side. Plus sub-menus are available if you hover over.
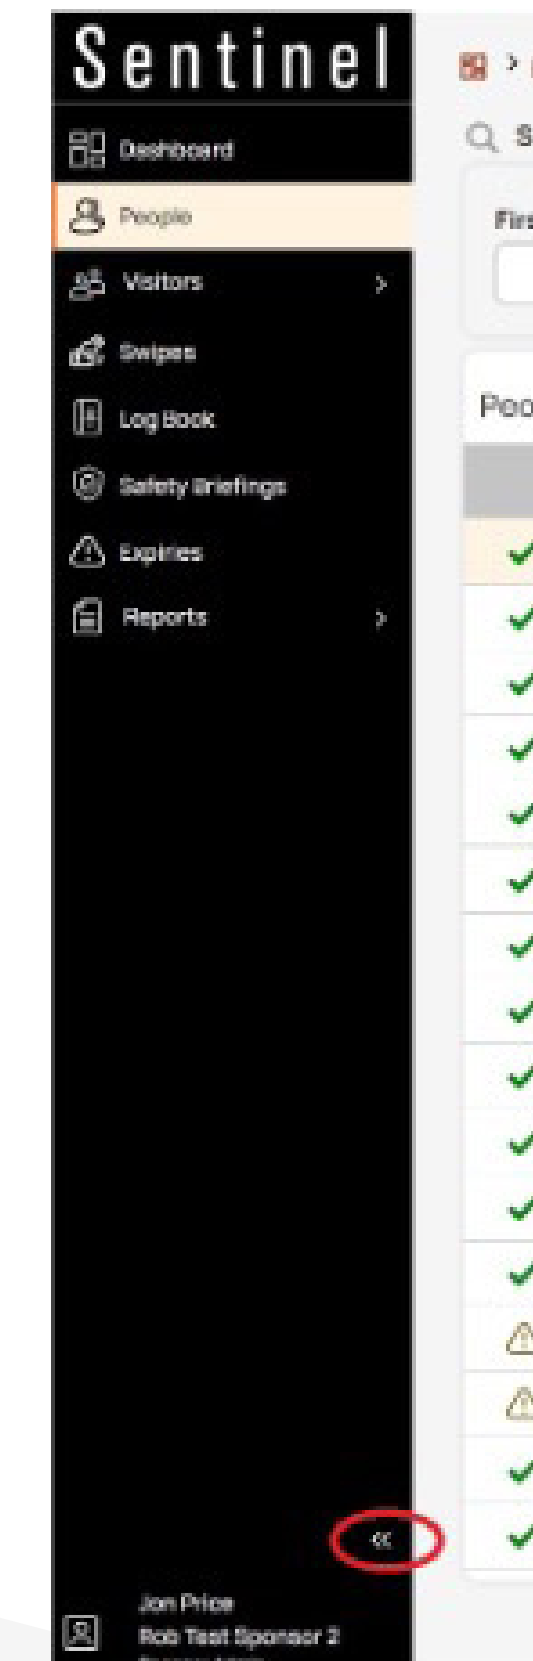

Person record

We've maximised use of space and focussed on better use of colour to help you focus on your priorities.

Key areas of the record that might need your urgent attention have indications on the tabs (see Competences tab on worker record above).
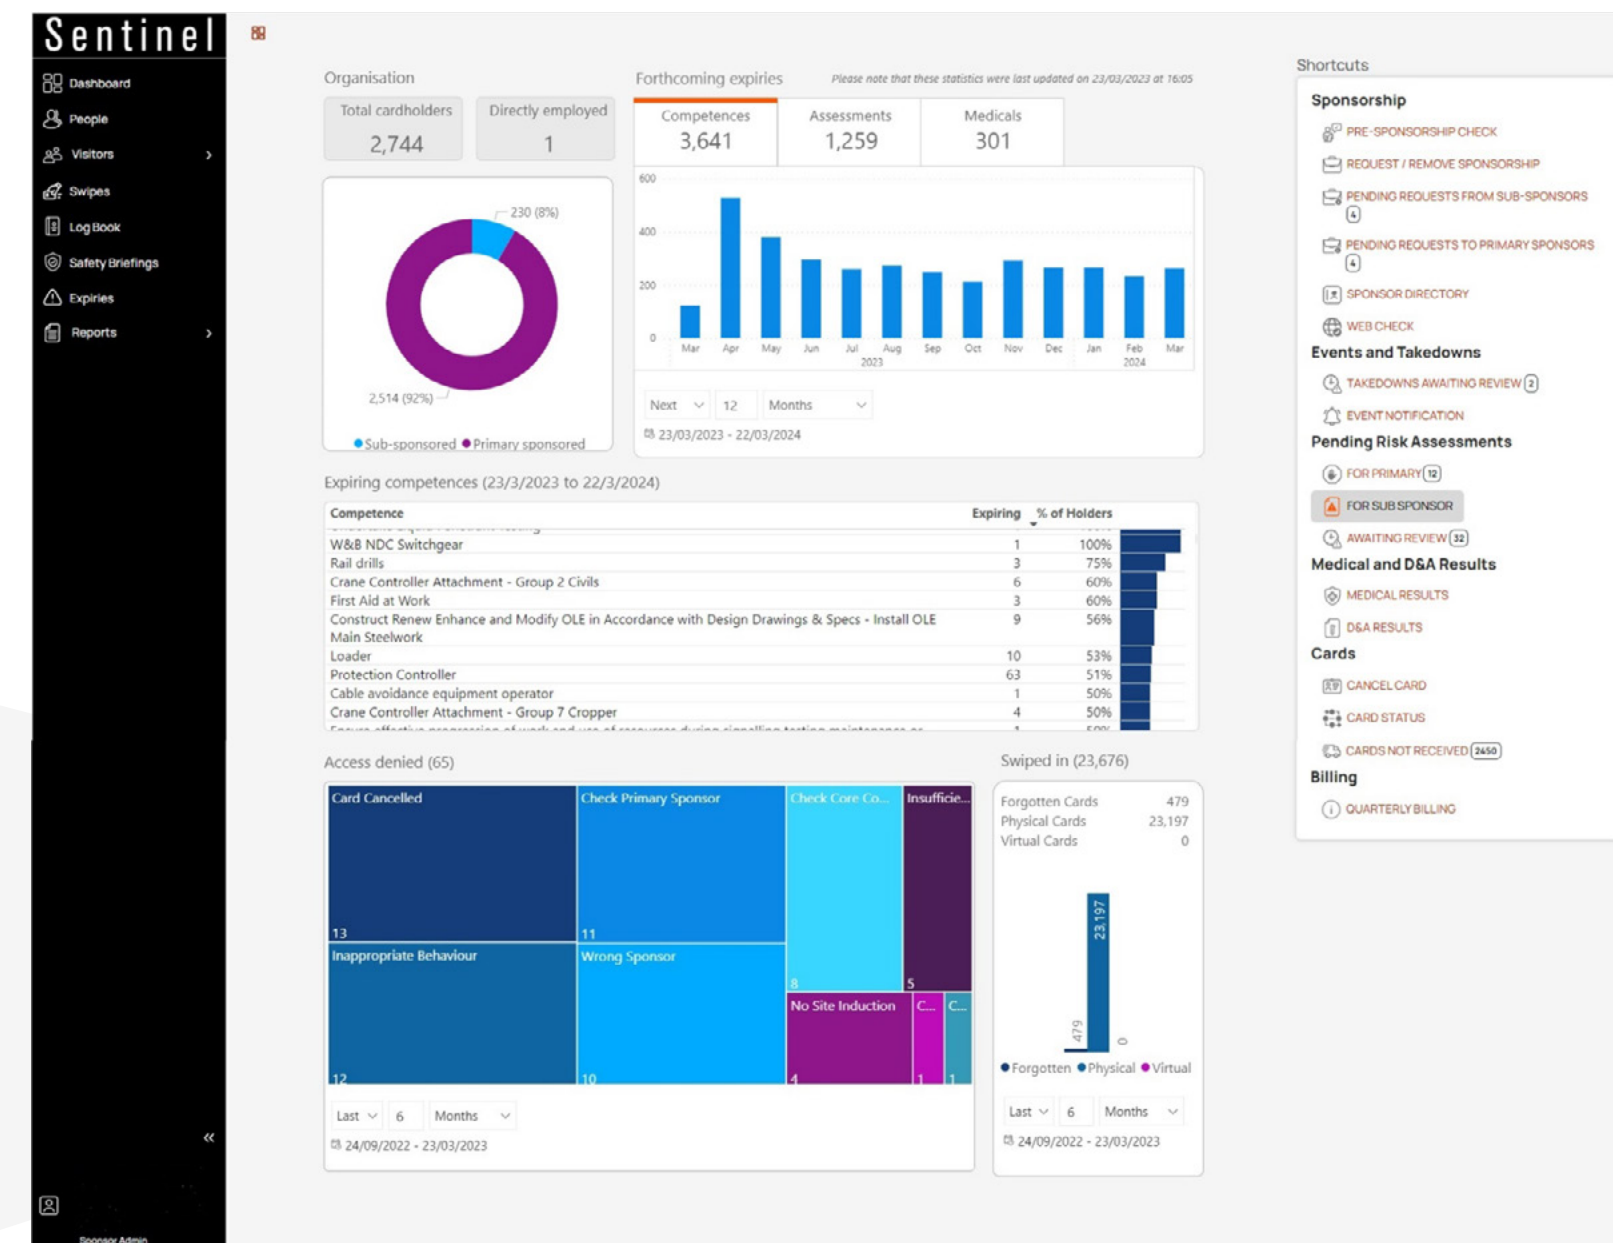

Left hand menu

If you find the left-hand menu is too wide, you can simply shrink it by clicking on the double arrow icon at the bottom highlighted in the picture.

Sentinel

Useful data insights visualised through Power BI

One of the biggest changes to the administration home page is the introduction of a range of graphics and breakdowns using Power BI. These provide immediate access to useful analysis specific to your workforce and access level, helping you and your organisation to get the most from the system.
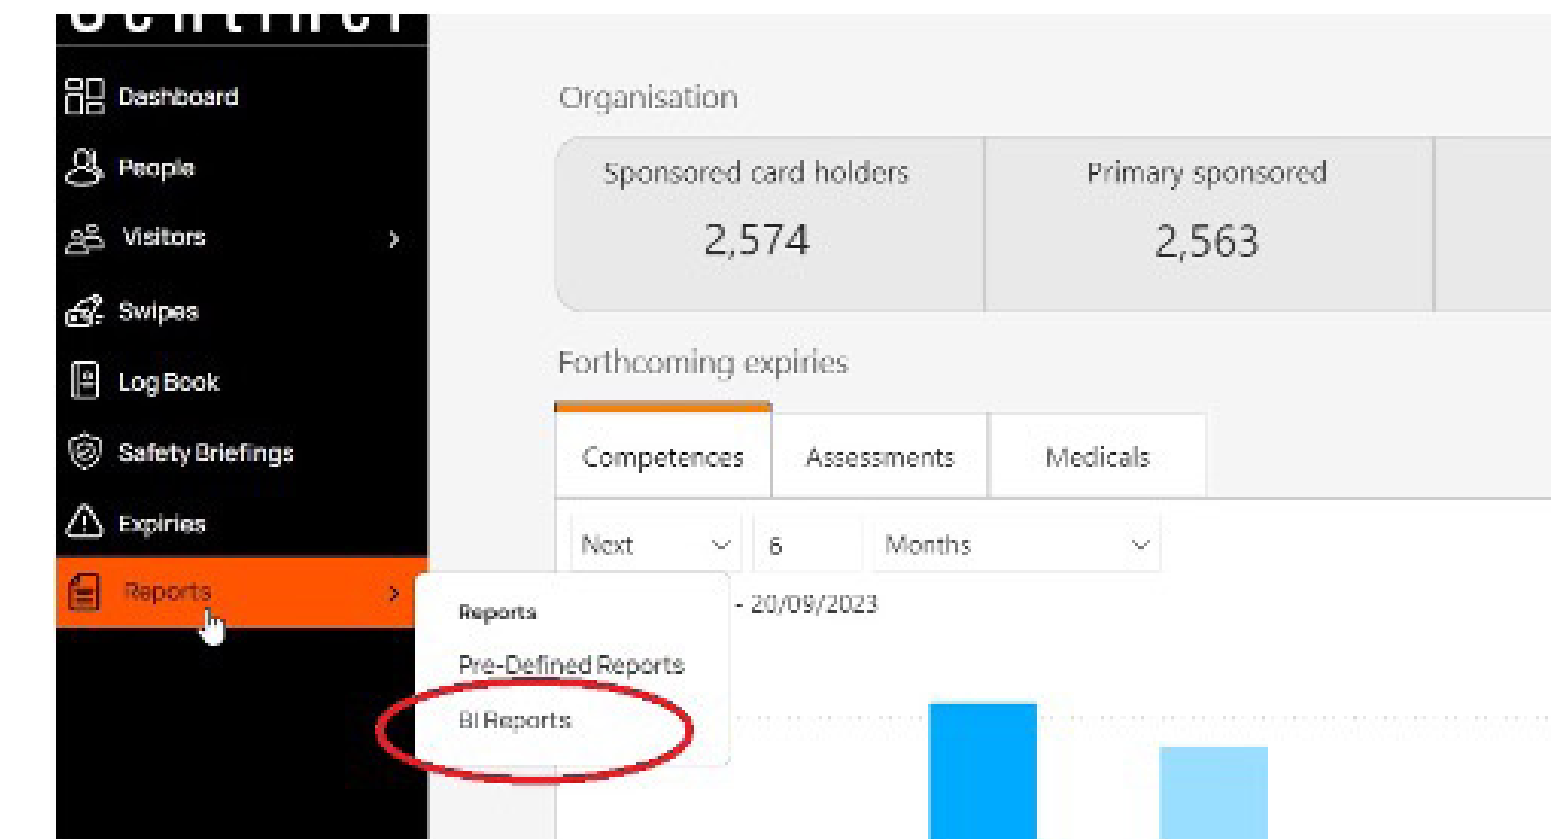

Dashboard

The information that you will find most useful is now displayed on the home page using Power BI graphics. But don't worry, all the old shortcuts are still available on the right-hand side of the dashboard (as shown below).

Additional Sponsor reporting using Power BI

Click on Reports in the left-hand menu to access this new level of analysis.
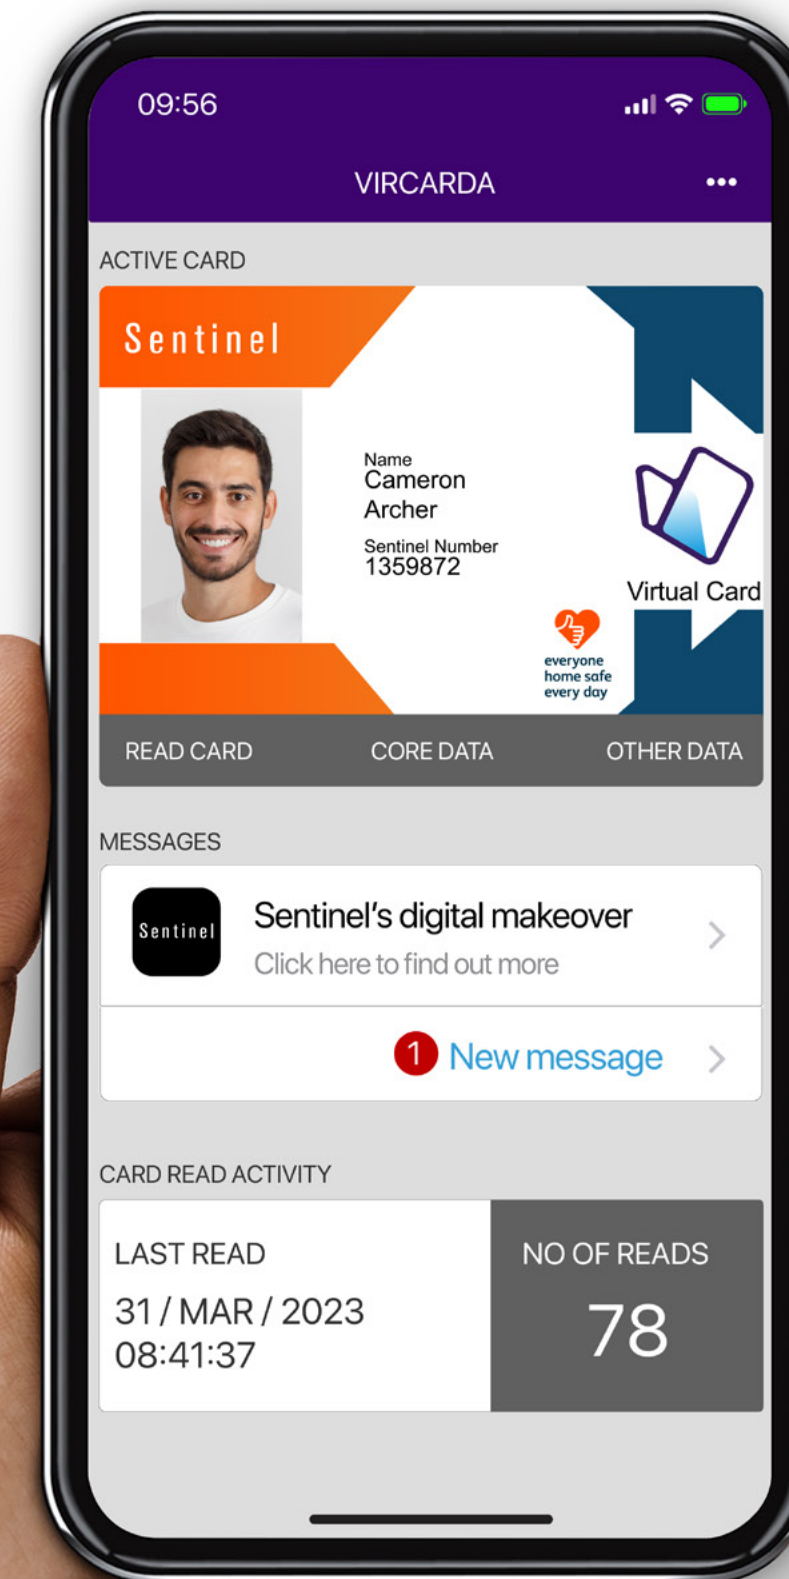

Sentinel

Virtual
Sentinel cards

Physical Sentinel smartcards will continue but it will be possible for individuals to have a virtual Sentinel card as well. Virtual cards can be stored on mobile devices for the ultimate in convenience. They are housed in a free wallet app called Vircarda and can be used similarly to physical cards.

Virtual cards:

Secure / The QR codes on virtual cards are short life (they last 30 seconds), so they cannot be copied or reused.

Always Available / If a cardholder has their phone with them, they'll also have their up-to-date virtual card.

Immediate delivery / With no printing or postage, cardholders can start using virtual cards almost immediately.

No Extra Charge / Sentinel virtual cards are free

Messaging / Tailored safety messages sent directly from Sentinel can also be displayed.

Note: Individuals must always be issued with a physical Sentinel card. The virtual card is a free optional addition. Virtual cards may be requested either by sponsor admins or by cardholders themselves through their mySentinel account.
